

## Declaration of conformity

To whom it may concern,

This is to certify that, Greenmood's preserved greenery will have the optimal outlook for at least 5 years and as it is a 100% natural product, it will age over time. All Greenmood products can last anywhere from 7 to 10 years or more if the instructions below are followed. The appearance of tone variations over time is normal, just like with all natural products.

The declaration above applies to Greenmood's preserved Ball Moss, Reindeer Moss, Foliage and Forest under the following conditions:

Avoid touching the foliage

Avoid long exposure to direct sunlight

Keep humidity level below 80%

Do not water the foliage

Dust regularly

Indoor use only

### What are preserved plants?

Preserved plants are all natural mosses and foliage that have undergone a preservation process in order to maintain their original appearance without the need of watering them.

### The preservation process

After partly drying the greenery, a formula consisting of bio based glycerine and food colorants replaces the sap and water within the plant, effectively forming a still-image of nature, creating a unique and all natural product.

### Care advise

To ensure the durability of preserved moss and plants it's important to take proper care of them by avoiding exposure to direct sunlight, humidity or water. Greenmood's preserved plants are extremely resistant and long lasting.

### **Minimum maintenance**

With the right care, you can enjoy your natural product for years to come.

Greenmood's natural products do not require pruning or watering. The only necessary care is occasional removal of dust, ideally with an air spray, air blower/dryer or alternatively dusting with a soft cloth.

### **Original beauty**

All preserved products by Greenmood are real, natural moss and plants that have been treated with a plant-based and biodegradable preservation liquid. No toxic ingredients are used.

### **The plants are not artificial**

Even though the product goes through a transformation process that stabilizes the natural plant, our process doesn't use any kinds of components typically found in artificial flowers, such as plastic or synthetic fabrics.

### **Our products do not grow**

In order to ensure that the plant holds its perfect moment, maintaining the appearance of a living plant, the preservation process stops all biological processes that promote the plant's aging.

### **Our products are not freeze-dried or dehydrated**

None of Greenmood's products use freeze-drying techniques for their preservation.

Freeze-drying destroys characteristics of the product that are important in order for it to have a fresh appearance.

### **They are safe**

All of our products can come in contact with pets and people. They do not represent a health hazard and they are not toxic.
