

# Hoverlight

Design by  
Cas Moor

A groundbreaking fusion of acoustic innovation, sustainability, and design, the Hoverlight is our first product that seamlessly incorporates lighting into our preserved greenery. Its durable material ensures the longevity of the product while also providing a contemporary aesthetic.

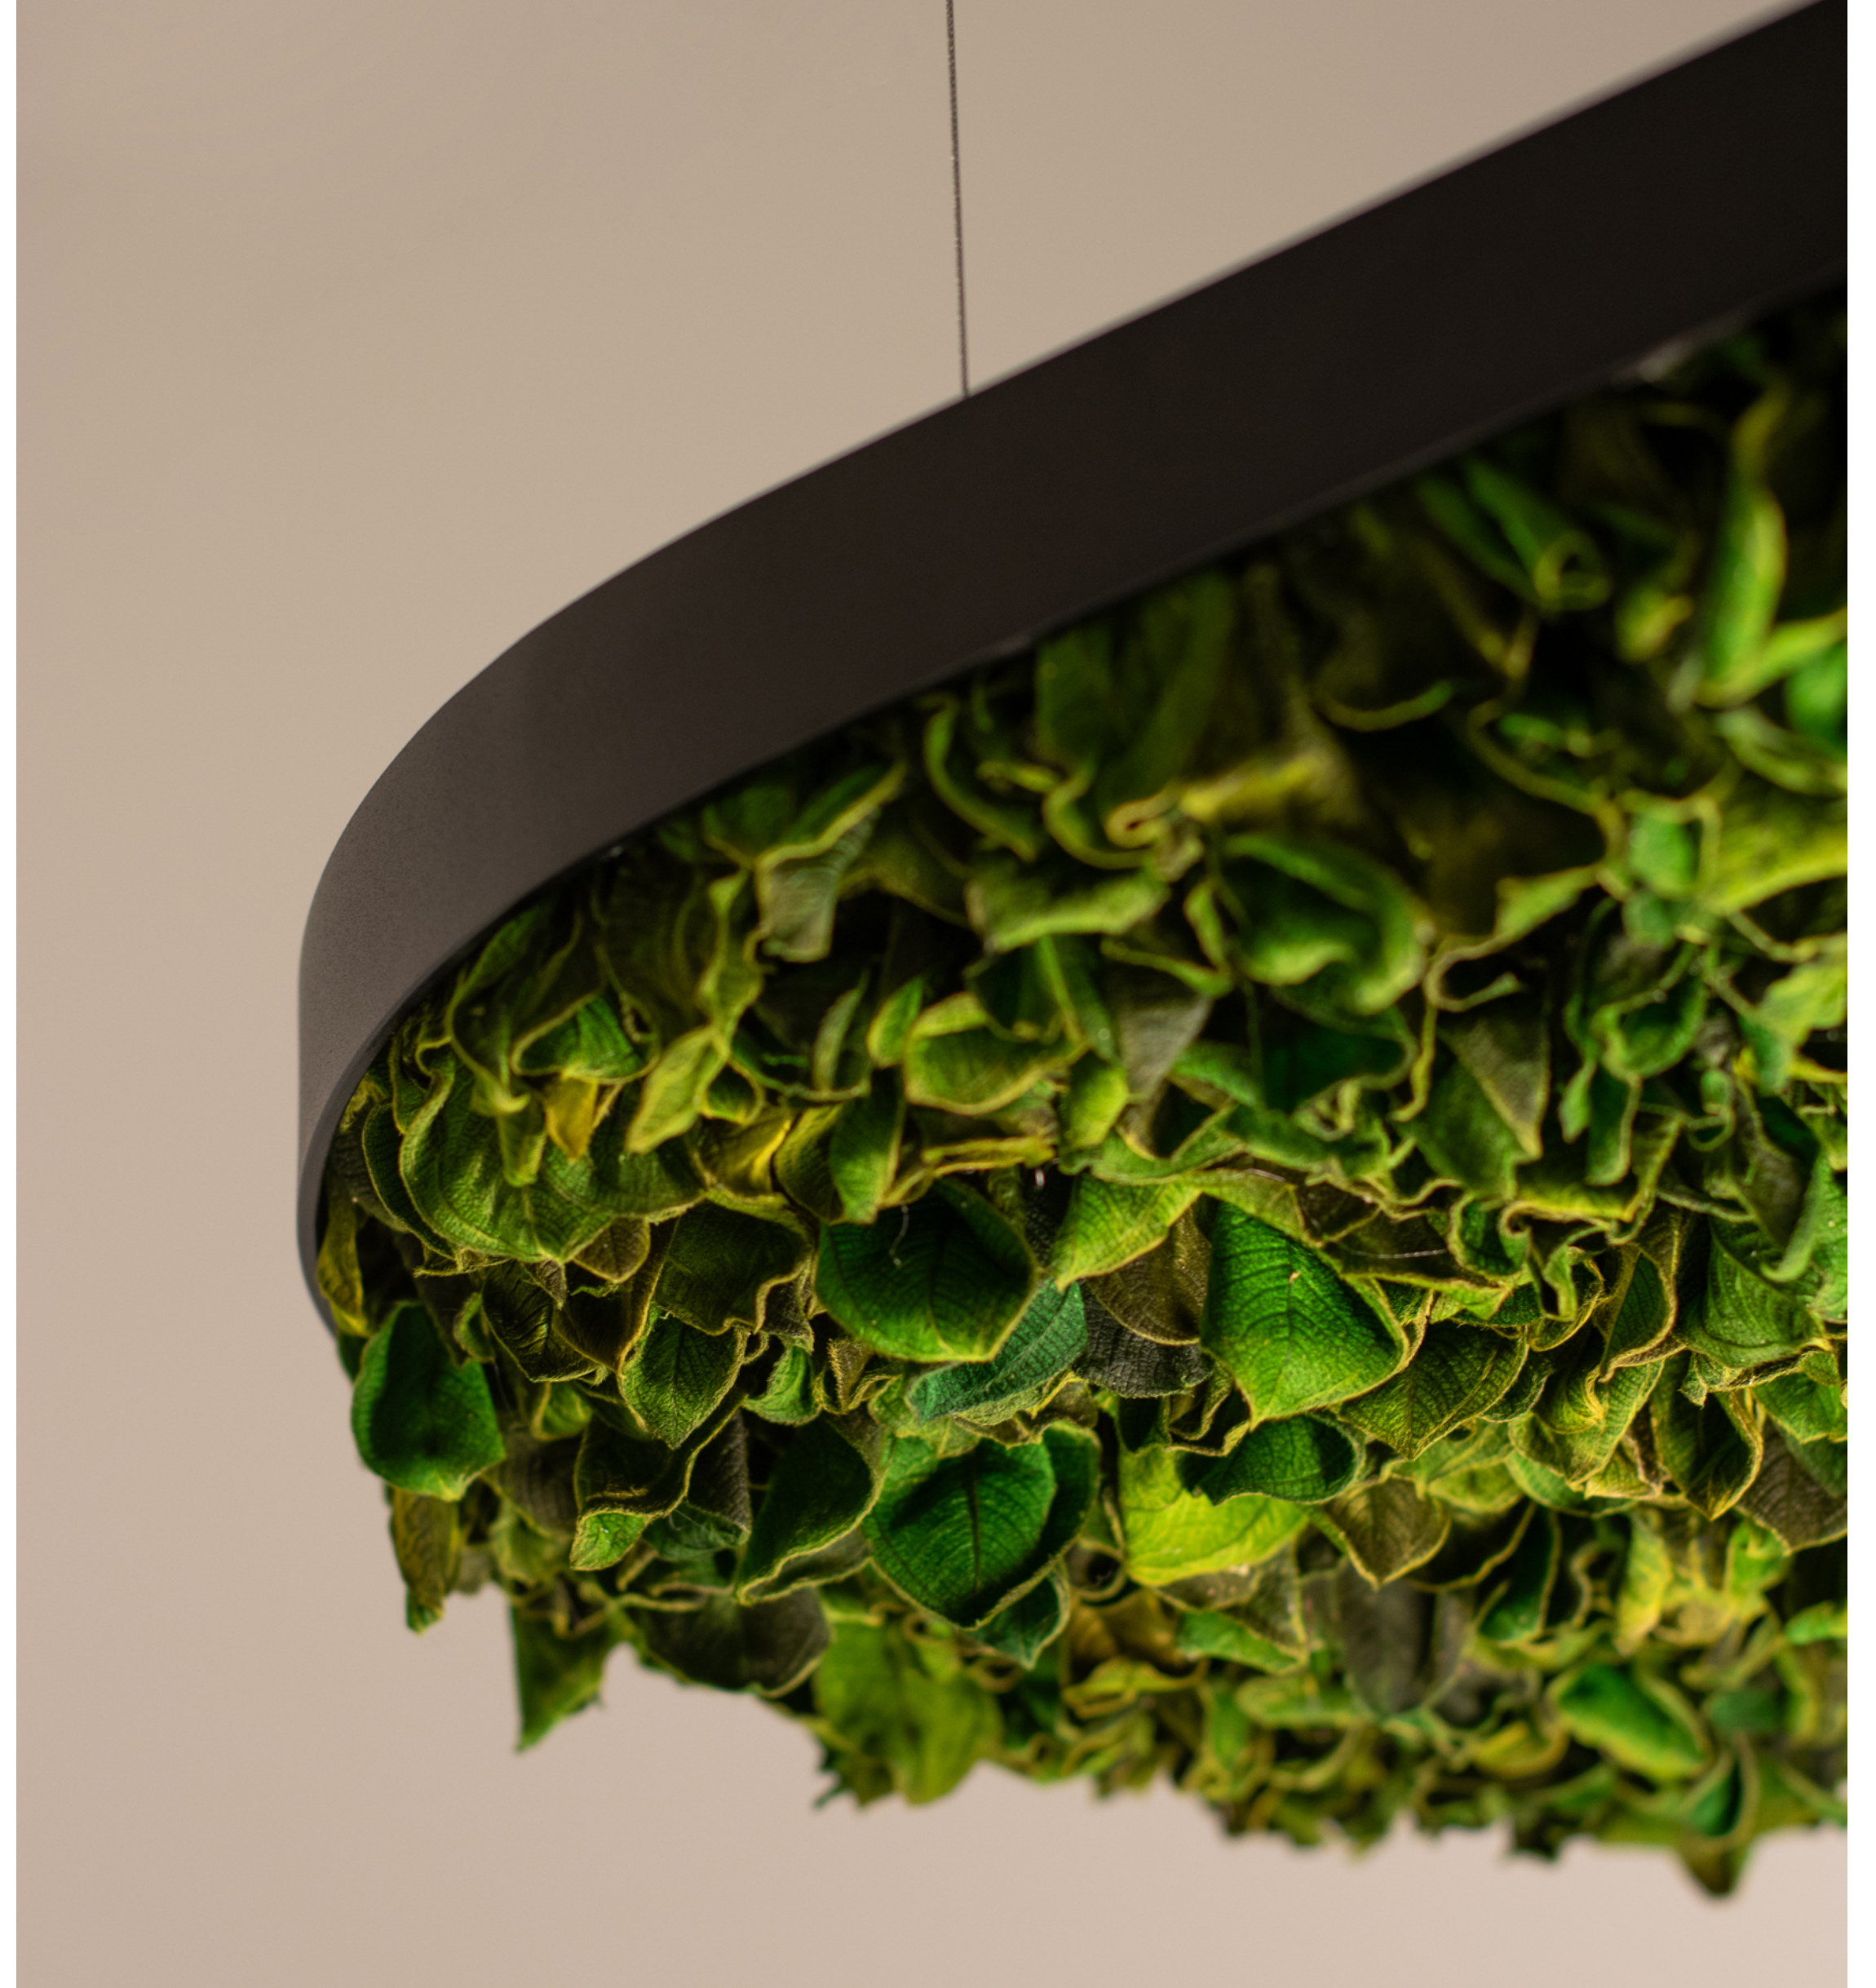

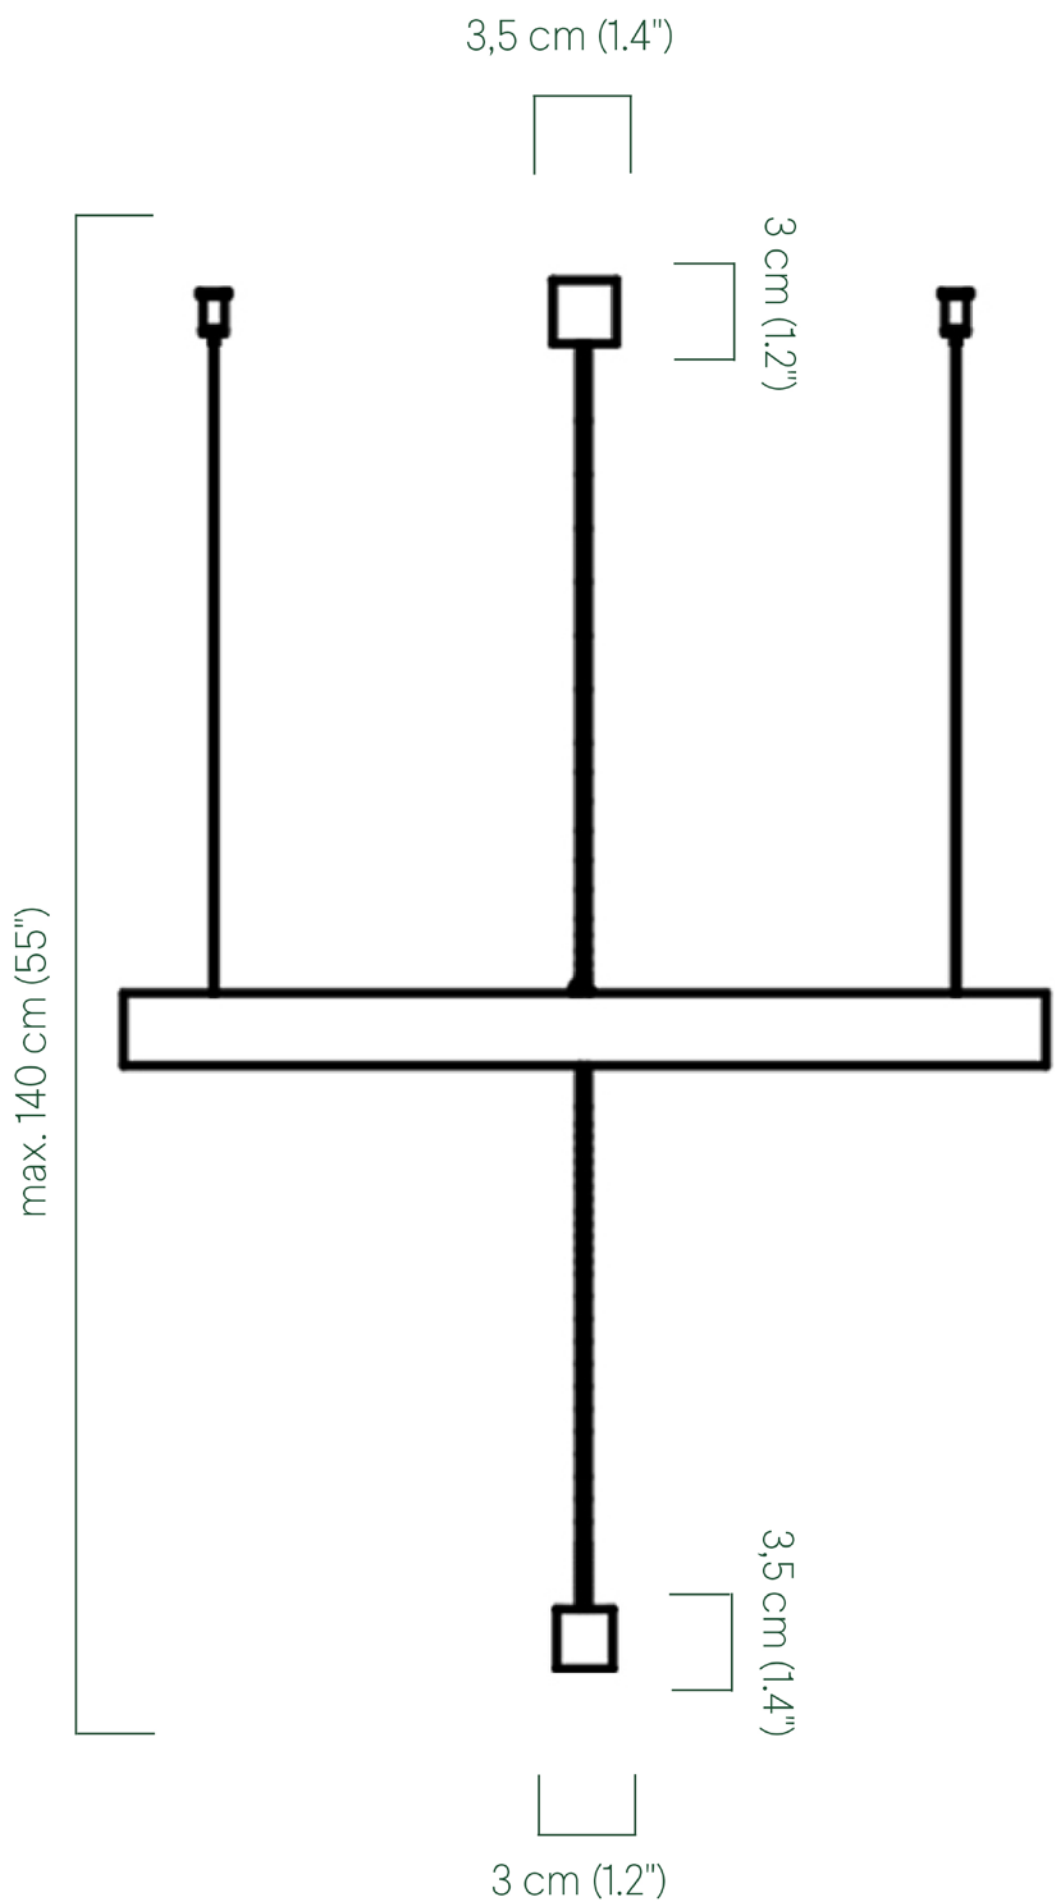

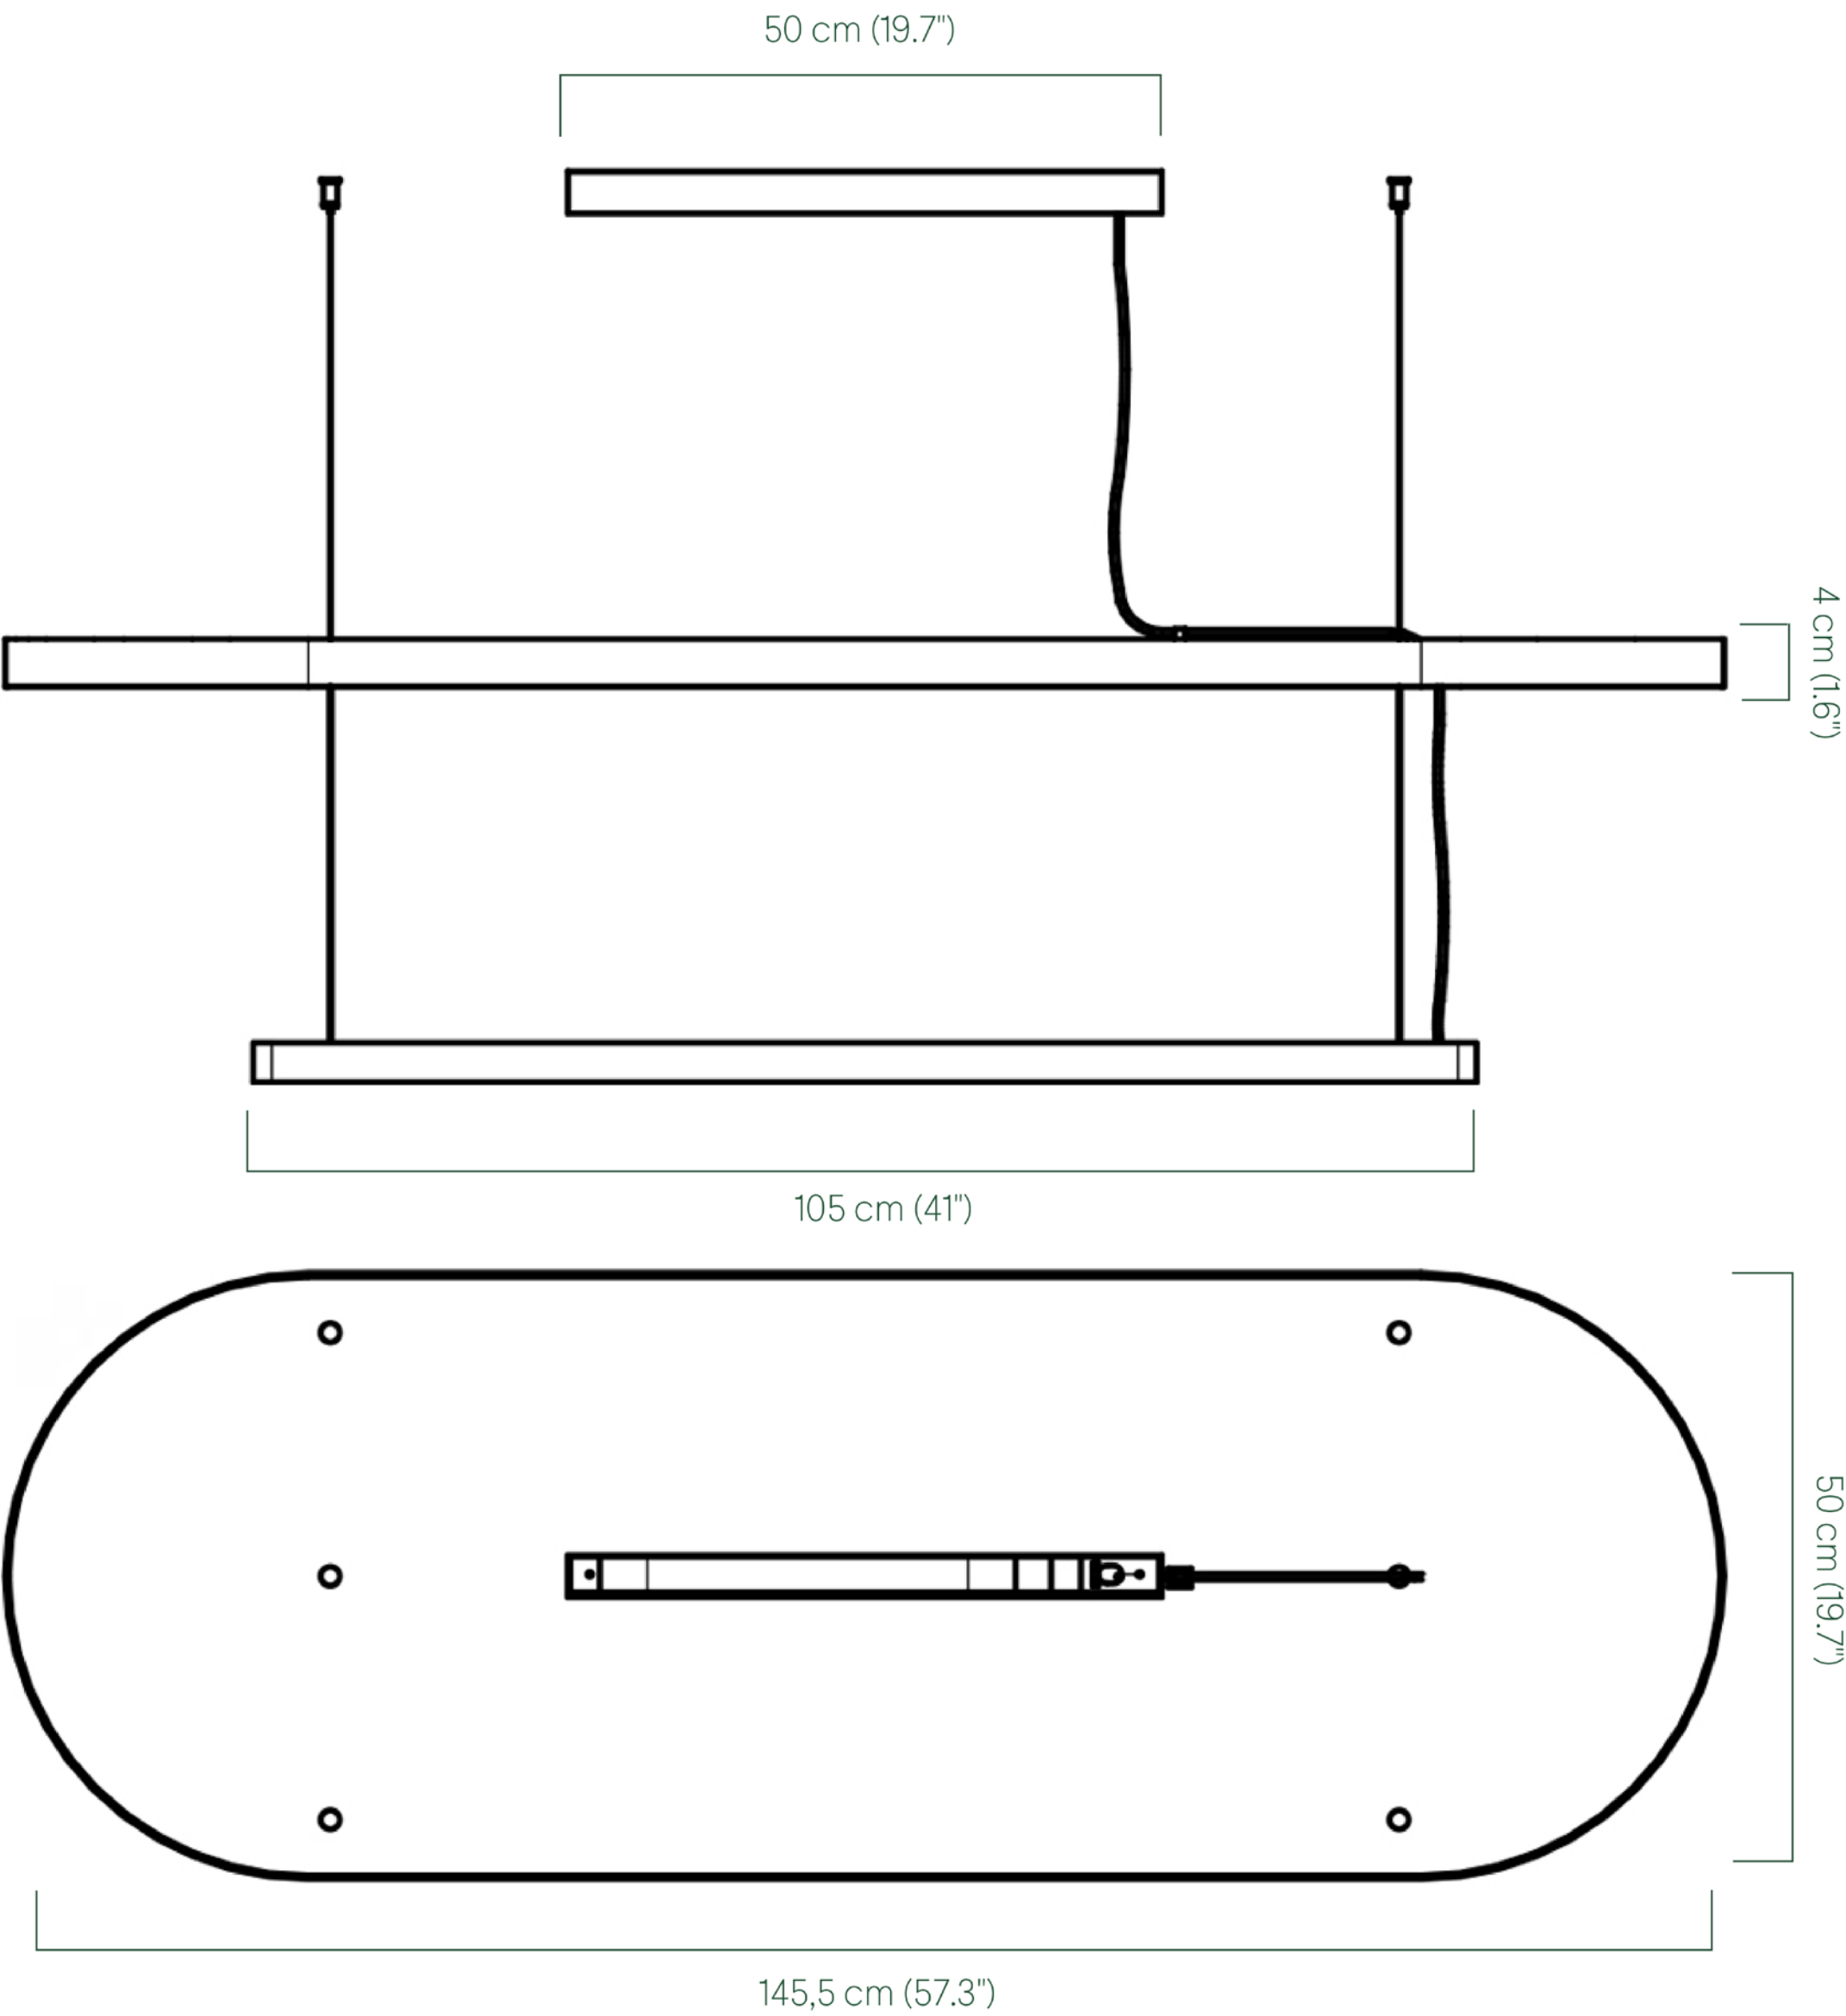

# Biophilic Lighting

---

Often forgotten by designers, light plays a crucial role in a space. In a biophilic interior, the lighting design aims to emulate the patterns and cycles of natural light. The objective is to create a harmonious and healthier environment that connects people with the natural world and enhances their well-being. This type of lighting typically involves adjusting its intensity, color temperature, and distribution or can be integrated with plants in order to bring an even more natural atmosphere. Hoverlight is a suspended lighting fixture featuring an acoustic panel made of preserved foliage, embracing biophilic principles by bringing a touch of the outdoors inside.

## Sound absorbing biophilic lighting

At its core, the Hoverlight features a cutting-edge LED module that delivers a soft and diffused up/down light, offering an impressive 2000 Lumen output with a CRI 90+ and temperature options of 2700/3000/3500/4000K. This dual functionality ensures that Hoverlight is not just a lighting solution but a holistic experience that enhances both visual appeal and auditory comfort.

The lamp's adaptable suspension length allows you to customize its proportions, enabling you to choose the distance that best complements your interior. Offered in two lighting configurations: upward and downward illumination, or exclusively upward.
